Day 10: Tuesday 08 December

Marshall/Robertsfield (ROB)/Return flight

Breakfast at the lodge, followed by a free day to relax by the sea or in the swimming pools, or to go snorkelling, kayaking or paddleboarding in the lagoon. There is the option of a boat trip to the 'CHIMPANZEE ISLANDS', a small archipelago of river islets situated at the mouth of the Farmington River, home to just under a hundred chimpanzees who survived years of experiments to test new medicines at a pharmaceutical research centre opened in the 1970s near Monrovia by the 'New York Blood Center', where these primates were used as laboratory test subjects due to their striking genetic similarity to humans. In 2006, the United States cut off funding, the centre suspended its activities, and the chimpanzees – accustomed to living in captivity and entirely dependent on humans – were abandoned on these islands. This could have been a death sentence for them, but volunteers from 'Liberia Chimpanzee Rescue' stepped in to provide care and assistance, and today the archipelago is home to a large community of healthy chimpanzees, divided into small groups and scattered across the various islands. As we approach by boat, we'll be able to spot numerous chimpanzees peeking out from the undergrowth or climbing the mangroves to have a look around, in the hope of receiving a mango or two from us. Some rooms available for day use. Transfer to the airport in good time for your return flight. END OF SERVICES
